RIPS Website — Project Vision & Scope Answers

Oct 17, 2026 · @Sarosh

These are answers to all 60 questions for rebuilding rips.edu.pk, the website of Radiant Institute of Professional Studies (RIPS), Sheikhupura. They draw on the institute's public listings and your rebuild plan; anything only management can settle is marked **Not Decided** or *(confirm)*. Urgent: the current site redirects visitors to a malware page, so this rebuild is also a security fix.

A. Project Identity & Background

01. Name of the website?

Radiant Institute of Professional Studies (RIPS), Sheikhupura — at rips.edu.pk. Social pages also say "Radiant University Sheikhupura" and the old site says "Radian"; use one approved name everywhere *(confirm)*.

02. Main idea behind the website?

The official website of RIPS, a private institute in Sheikhupura offering pharmacy, DPT, nursing, allied health, computer science and business programs. It presents the institute, its programs, faculty and affiliation. It lets students and parents check eligibility, fees and admission dates, and enquire or apply online. It also publishes news, notices and merit lists for current students.

03. Industry or sector?

Education — higher and professional education, mainly health sciences, in Pakistan.

04. New, redesign or upgrade?

A full rebuild of an existing website. The old WordPress site on Hostinger is replaced by a new site built in VS Code, on a new host, keeping the same domain.

05. Existing URL?

rips.edu.pk — currently compromised: on 17 Oct 2026 it redirected visitors to a malware page. A staging copy also sits at test.rips.pk *(confirm it is yours)*.

06. Who owns the project?

An organization: Radiant Institute of Professional Studies, a private educational institute (Chairman: Colonel (R) Ghulam Mustafa Hussain). The domain is managed through DOMAIN.pk.

07. What inspired it, and why develop it?

The old site cannot be managed (no Hostinger access), was built on a demo template with placeholder content, and has now been hacked. RIPS needs a secure, accurate site its own staff can keep current, because the website is often a family's first impression during admissions.

B. Problem Statement

08. What problem will the website solve?

Students and parents around Sheikhupura cannot get reliable, current information about RIPS online — programs, eligibility, fees, affiliation, admission dates — or enquire easily. The current site is out of the institute's control and unsafe to visit.

09. Who experiences this problem?

Prospective students and their parents; current students looking for notices and merit lists; admissions staff answering the same questions by phone; and management, whose credibility suffers.

10. How do people deal with it now?

Phone calls and WhatsApp to the admissions office, campus visits, posts on Facebook, Instagram, TikTok and YouTube, word of mouth, and third-party listing sites.

11. Weaknesses of these solutions?

- Social posts get buried and are hard to search; there is no single official source for fees, eligibility and dates.
- Phone enquiries only work during office hours and repeat the same answers.
- Proof of affiliation and approvals is not shown in one place.
- The current site is hacked, and its staging copy is full of template filler (lorem ipsum, demo links, other universities' names), which hurts trust.

12. How will the website do better?

One fast, secure, mobile-first official source. Each program gets a page with eligibility, duration, fees and affiliation. Admission steps and deadlines are clear, with an online enquiry form, WhatsApp click-to-chat and a downloadable prospectus. Staff can post notices and merit lists without a developer.

13. Evidence the problem exists?

Not Decided. The hack itself is verified (redirect seen 17 Oct 2026). Worth gathering before launch: enquiries per intake, the ten questions admissions hears most by phone, and Facebook page insights; after launch, Google Search Console data.

C. Project Vision & Objectives

14. Long-term vision (3–5 years)?

The website becomes RIPS's main admissions channel and the most trusted source for health-sciences admissions in Sheikhupura. Online applications, a student portal (results, fee vouchers, attendance) and an LMS link are added in stages. It ranks first locally for searches like "pharmacy admission Sheikhupura".

15. Primary objective?

Turn visitors into admission enquiries: give accurate program information and an easy way to enquire or apply.

16. Top 3–5 goals?

1. Replace the hacked site with a secure, fast one under the institute's full control.
2. Publish complete, accurate pages for every program, with affiliation and approvals.
3. Deliver online enquiries to admissions, answered within one working day.
4. Let staff post notices, merit lists and news without a developer.
5. Rank on Google for local admission searches.

17. Highest priorities?

In order: security; accurate, credible content; fast performance on mobile data; ease of updating; low running cost. Visual design matters, but follows these.

18. How will success be measured? *(targets to confirm)*

- Enquiries and applications submitted through the site per intake.
- Share of enrolled students whose first contact was the website.
- Monthly visitors and Google ranking for key admission searches.
- Pages load in under 3 seconds on a 4G phone.
- Zero security incidents; fewer repeat phone enquiries.

D. Target Audience & Users

19. Primary target audience?

Prospective undergraduate students who have finished intermediate (FSc, ICS, FA or equivalent), and their parents, in and around Sheikhupura.

20. Secondary audience?

Current students, alumni, people applying for faculty or staff jobs, the affiliating university and inspection teams checking public disclosures, hospitals and employers offering internships, and the general public.

21. Age, technical knowledge, preferences and needs?

- **Students (about 17–22):** browse on Android phones over mobile data; at home on WhatsApp, Facebook and TikTok; impatient with long forms. They need eligibility, fees, deadlines and career prospects.
- **Parents (about 40–60):** less technical, often prefer Urdu. They care about fees, affiliation and recognition, safety, and facilities *(confirm which exist, e.g. transport, hostel)*.

22. Regions served?

Sheikhupura city and district, plus nearby areas such as Lahore, Nankana Sahib, Gujranwala and Hafizabad — Punjab, Pakistan *(confirm)*.

23. Languages?

English as the main language. Urdu for the key admission content (program summaries, admission steps, contact) in v1 if possible; a full Urdu version later.

24. Types of users?

- **Visitors** (no login): prospective students, parents, public.
- **Staff** (login): admissions officer, content editor, site administrator.
- **Registered students:** a later phase, with the student portal.

25. What each user type can do?

User	Can do
Visitor	Browse programs; see fees, eligibility and dates; download the prospectus; submit an enquiry or application; contact by WhatsApp, phone or map; read news and merit lists
Admissions officer	View and export enquiries; update admission dates, fees and merit lists
Content editor	Publish news, events, notices, gallery photos and faculty profiles
Site administrator	Manage staff accounts, site settings, backups and security

26. Accounts or open access?

The public site is fully open — no registration. Only staff log in. Student accounts come later with the portal.

E. Website Scope & Features

27. Major pages or sections?

- **Home**
- **About:** introduction, Chairman's and Principal's messages, vision and mission, leadership and team, affiliation and approvals
- **Programs:** an index plus one page each for Pharmacy, DPT, Nursing, Allied Health Sciences, Computer Science, Business Studies and short courses *(confirm exact degree titles)*
- **Admissions:** process, eligibility, fee structure, scholarships, important dates, enquire/apply
- **Merit Lists & Notices**
- **Faculty**
- **Campus & Facilities:** labs, library, gallery
- **News & Events**
- **Careers** (jobs at RIPS)
- **Contact:** map, phone, WhatsApp, email
- **Privacy Policy**

28. All features in mind?

Mobile-first responsive design; structured program pages; enquiry and application forms; WhatsApp click-to-chat; downloadable prospectus, fee structure and forms (PDF); news, notices and events; merit lists; photo gallery and campus video; Google Map; faculty directory; Open Day booking; site search; SEO (titles, sitemap, school schema markup); analytics; an admin area for content and enquiries; email alerts on new enquiries; HTTPS and form spam protection; social media links.

29. Must-have for first release?

Home, About (with affiliation and approvals), all Program pages, Admissions (process, eligibility, fees, dates), Contact with map and WhatsApp, an enquiry form that reaches admissions by email, News/Notices, mobile-friendly layout, HTTPS, basic SEO and Google Search Console.

30. Nice-to-have (later)?

Online application with document upload, admin dashboard, faculty profiles, gallery, Open Day booking, Urdu version, blog, student testimonials, site search, Careers page, chatbot.

31. Explicitly out of scope?

Online fee payment, student portal (results, attendance, fee vouchers), LMS, mobile app, hostel or transport booking, and staffed live chat. Also out: reusing the old WordPress code, theme or demo content.

32. Main user journey?

1. Finds the site via Google, Facebook or a shared link.
2. Picks a program from Home or Programs.
3. Reads eligibility, duration, fees and affiliation.
4. Checks admission dates and steps.
5. Submits an enquiry or application, or taps WhatsApp.
6. Sees an on-screen confirmation and gets an email reply.
7. Admissions calls back; the student visits campus and enrolls.

33. Admin panel?

Yes, kept light. Its purpose: let staff edit dates and fees, post notices, merit lists and news, and view or export enquiries. Since the site is hand-built in VS Code, options are a Git-based content editor or forms that feed email plus a Google Sheet *(Not Decided)*.

34. Interactive functions?

Function	v1?	Notes
Forms (enquiry, contact)	Yes	Spam-protected, auto-reply to the applicant
Notifications	Yes	Email to admissions on every submission
Messaging	Yes	WhatsApp click-to-chat
File uploads	Later	For applications: photo, results; handle ID copies securely
Search	Later	Useful once news and notices grow
Bookings	Later	Open Day or campus visit
Payments	No	Future phase

35. External integrations?

Google Maps, WhatsApp, a form or email delivery service, Google Analytics and Search Console, and links to Facebook, Instagram, YouTube, TikTok and LinkedIn. Optionally Google Sheets for enquiries. No payment gateway in v1; JazzCash, Easypaisa or bank payment later.

36. Mobile app later?

Website-only for now, built mobile-first (and optionally installable on phones as a web app). Revisit a native app once the student portal exists.

F. Branding, Design & User Experience

37. Design style?

Clean, modern and professional, with an academic and healthcare feel. Real campus, lab and student photos carry the design; typography is clear. Animation is light, because heavy effects slow pages on mobile data.

38. Existing brand identity?

A logo exists (used on the old site); get the original high-resolution file *(confirm)*. Colors, fonts and brand guidelines: Not Decided — derive a palette from the logo. Fix the "Radian" / "Radiant" spelling mix and settle on one official name.

39. 3–5 websites you like?

Not Decided. Shortlist after reviewing a few Pakistani university sites, e.g. gcuf.edu.pk (the affiliating university, for consistency), riphah.edu.pk (health-sciences programs) and lums.edu.pk (navigation) — note what you like about each.

40. Mobile-first, desktop-first or both?

Mobile-first. Most students and parents will visit on a phone; desktop gets the same content in a wider layout.

41. Accessibility requirements?

- Low bandwidth: compressed images, no autoplay video, light pages (about 1.5 MB or less).
- Readable text size and strong colour contrast.
- Keyboard navigation, alt text on images, labelled form fields (WCAG 2.1 AA basics).
- Correct Urdu text rendering wherever Urdu is used.

G. Content & Data

42. Types of content?

Text (about, programs, admissions), images (campus, labs, events), videos (YouTube embeds such as a campus tour), PDFs (prospectus, fee structure, merit lists, admission forms, notices), news and event posts, faculty profiles, and affiliation and approval letters.

43. Who provides content, and who updates it after launch?

Departments supply it: admissions (dates, fees, merit lists), HODs (program details), Chairman and Principal (messages), administration (photos). You build and publish the site. After launch, one named admissions or admin staff member updates notices *(confirm who)*; the Principal or Director approves.

44. What information is collected from users?

- **Enquiry form:** name, phone (WhatsApp), email, city, program of interest, last qualification and marks, message.
- **Application (later phase):** adds father's/guardian's name, CNIC or B-form number, date of birth, address, academic results, photo and documents.
- **Payment information:** none.

45. Will data be stored, searched, downloaded or reported on?

Yes. Enquiries are stored (email plus a spreadsheet or database), searchable by program and date, and exportable to Excel/CSV for follow-up. Reports show enquiries per program and source, and how many became admissions. Access is limited to admissions staff, and old records are deleted after a set period *(confirm, e.g. one year after the intake)*.

H. Business Model & Competitors

46. Business model?

Non-commercial and informational, with lead generation for admissions. The institute earns from tuition, not from the site. No advertising.

47. Main competitors?

Not Decided — name the 3–5 institutes your applicants also consider. Typically: other private health-sciences and IT institutes in Sheikhupura, larger private colleges and universities in Lahore, and government colleges in the district. Admission-listing sites (ilmkidunya, result.pk) also compete for the same searches.

48. 3–5 strongest unique selling points? *(confirm each)*

1. University affiliation (GCUF, per the institute's YouTube channel) — show the letters openly.
2. Health sciences, computing and business on one campus in Sheikhupura, so students need not travel to Lahore.
3. Practical, skill-based training in labs, with internship and placement support.
4. Scholarships and flexible fee plans (the old site advertised early-applicant discounts).
5. Experienced leadership and faculty, with named profiles.

I. Stakeholders & Responsibilities

49. Key stakeholders?

Stakeholder	Role in the project
Colonel (R) Ghulam Mustafa Hussain, Chairman	Owner; final say on direction
Muhammad Ayyub Bhatti, Director	Management; likely approver
M. Ramzan, Principal	Academic content; Principal's message
HODs (e.g. M. Nazar Ranjha, Pharmacy)	Program details for their department
Admissions office	Dates, fees, merit lists; answers enquiries
You	Developer and designer; builds, launches and maintains
Hosting provider (new)	Servers, uptime, SSL
DOMAIN.pk / PKNIC	Domain registration and DNS
Affiliating university	Affiliation documents shown on the site

50. Who approves requirements, scope changes and launch?

Not Decided — name one person, most likely the Chairman or the Director *(confirm)*. One approver avoids conflicting instructions.

51. Who handles development and maintenance after launch?

You, in-house: code, hosting, security updates and backups. A named staff member updates notices and merit lists. Name a backup person and keep the code in a Git repository with short handover notes.

J. Constraints, Dependencies & Risks

52. Approximate budget?

Not Decided. Development is in-house. Recurring costs to budget for: the .edu.pk domain renewal, hosting (static hosting can cost little or nothing), a form/email service if used, and optional photography.

53. Completion date and launch deadline?

Not Decided. Proposed: a safe holding page right away, then the full site live before the next admissions intake opens *(confirm that date)*.

54. Mandatory or restricted technical choices?

- **Mandatory:** keep the rips.edu.pk domain, managed through DOMAIN.pk.
- **Restricted:** not Hostinger (no access), and not the old WordPress install or theme.
- **Chosen:** hand-built in VS Code (HTML, CSS, JavaScript; framework *to confirm*).
- **Not Decided:** the new host, and where institute email lives.

55. Existing assets to reuse?

The domain; the logo; photos and videos on the institute's Facebook, Instagram, YouTube, TikTok and LinkedIn; the leadership messages and team list from the old site. Not reusable: the old code, and the staging copy's demo text and images.

56. External dependencies for launch?

DNS changes at DOMAIN.pk; content from departments (fees, dates, program details); affiliation and council approval documents; a new hosting account; a form or email service; and management sign-off.

57. Legal, privacy, regulatory and security requirements?

- **Accurate claims:** advertise only programs with valid affiliation and council approval, and show the documents.
- **Name:** use the institute's registered name. "University" is generally reserved for chartered institutions, so check before using "Radiant University" publicly.
- **Privacy:** a privacy notice on every form, consent to be contacted, minimum data, and extra care with CNIC/B-form numbers.
- **Copyright:** only images and text RIPS owns or licenses — no template stock content.
- **Security:** HTTPS, regular updates, strong passwords, and two-factor login on the domain and hosting accounts.

58. Biggest risks and challenges?

Risk	Why it matters	Response
Live site hacked (redirects to a malware page)	Visitors exposed; Google may flag rips.edu.pk as dangerous	Point DNS at DOMAIN.pk to the new host or a holding page now; once clean, request a review in Google Search Console
No access to Hostinger	Old files, database and possibly email lost; email may break on DNS change	Note current MX/email records before switching; ask Hostinger support to recover or close the account

Risk	Why it matters	Response
test.rips.pk is public	Indexed by Google with demo text, broken demo links and a spam adult-video listing	Take it down, or password-protect it and block indexing
Content arrives late	Launch slips past the admission season	Fixed content checklist with owners and dates
One developer	Work stops if you are unavailable	Git repository, handover notes, a backup person
Wrong fees, dates or affiliation	Complaints and reputational or regulatory trouble	Admissions and Principal approve every figure
Form spam	Admissions inbox floods	CAPTCHA or honeypot field, rate limiting

K. Delivery & Success Criteria

59. Conditions before v1 can launch?

- [ ] Every must-have page complete with real, approved content — no lorem ipsum or demo text
- [ ] Fees, dates, eligibility and affiliation checked by admissions and approved by the Principal
- [ ] Enquiry form tested end to end: reaches admissions email, sends the auto-reply, blocks spam
- [ ] Works on Android, iPhone and desktop browsers; loads in under 3 seconds on 4G
- [ ] HTTPS active; a malware scan comes back clean
- [ ] Old hacked server disconnected from the domain
- [ ] Institute email (MX records) confirmed working after the DNS switch
- [ ] Google Search Console set up, sitemap submitted, no security warning on the domain
- [ ] Analytics running; code in a Git repository with a backup
- [ ] Privacy policy published
- [ ] Final sign-off from the approver named in Q50

L. Future Roadmap

60. Plans after the first launch?

- **Phase 2 (next intake):** online application with document upload and an admin dashboard; Urdu version; Open Day and campus-visit booking; full faculty profiles.
- **Phase 3 (1–2 years):** student portal (results, attendance, fee vouchers); online fee payment (JazzCash, Easypaisa or bank); LMS link; alumni network and job board; installable web app or mobile app.
- **Growth:** pages for new programs (e.g. postgraduate) as they are approved, and outreach to students beyond Sheikhupura district.

Sources

- Radiant University Sheikhupura — YouTube channel: affiliation (GCUF) and programs offered.
- Staging site test.rips.pk (opened 17 Oct 2026): leadership names, Damoana Road location, course categories, template and spam content. Not linked here because of the spam listing.
- rips.edu.pk (17 Oct 2026): redirected to a malware page on opening; facts above come from its search-engine listing. Do not open it until the DNS is switched.
