WEBSITE DEVELOPMENT / DOCUMENT 06 — ANSWERS

Wireframes & UI/UX Design

Completed questionnaire: layouts, interactions, states and visual rules

PROJECT / WEBSITE	Radiant Institute of Professional Studies (RIPS), Sheikhupura — rips.edu.pk
PREPARED BY	Sarosh (website developer)
DATE / VERSION	17 October 2026 / v1.0 draft answers — for review
COVERAGE	39 questions · 8 sections · 4 low-fidelity mobile wireframes · 4 page checklists · 3 interaction records
INPUTS	Doc 01 PVS answers (draft v0.1) · Doc 02 PRD answers (draft v1.0) · Doc 03 SRS answers (draft v1.0) · Doc 04 workflows · Doc 05 sitemap

How to read this. References use the earlier documents' IDs: **PVS Q**n (Doc 01), **PRD Q**n (Doc 02), SRS IDs such as **B-01**, features **FEAT-001…006** and open decisions **OD-01…18** (Doc 03). **Not Decided** names its owner. **Not Applicable** gives a reason. *(proposed)* marks a recommendation the approver must confirm.

CONTENTS

Sections and worksheets

A	Design inputs & coverage	5 questions
B	Page goals & hierarchy	5 questions
C	Navigation & interaction	5 questions
D	Forms & transaction states	5 questions
E	Responsive & accessible design	6 questions
F	Visual system & content	5 questions
G	Trust, privacy & permissions	4 questions
H	Review & acceptance	4 questions
W	Low-fidelity mobile wireframes: Home, Program page, Enquiry form, Notices	
W	Page wireframe checklists: Home, Program page, Enquiry form, Notices	
W	Interaction & state records: IS-01 submit enquiry, IS-02 filter notices, IS-03 publish merit list	

A. Design inputs & coverage

01. Which approved pages and priority workflows need wireframes first? Link to Documents 04 and 05.

1. Home (entry to J1–J4).
2. Program page (J1).
3. Enquiry form and Thank-you (J1, UC-01).
4. Admissions and Fee structure (J2).
5. Notices list and notice page (J3).
6. Staff: notice form and merit-list confirmation (J5, UC-02).
7. Staff: enquiries list and detail (J6).

Mobile first, then desktop. Low-fidelity mobile sketches of the first four are included at the end.

02. Which page templates can share a layout, and which need a distinct design?

Shared layout	Pages
List template	Programs, Notices, Archive, News
Detail template	Program page, notice page, news post
Text page	About, Affiliation, Privacy, Terms, Careers
Form template	Enquire, Contact

Distinct designs: Home, Admissions with fee table, Thank-you, 404, staff screens (largely set by the admin tool, OD-05).

03. What content and sample data must be available to make the wireframes realistic?

> Real program names and approximate text lengths (OD-07); a sample fee table with the real number of lines; 5 real notice titles; leadership names and message length; real photos or at least their orientation; the longest program name; real contact details. Where real data is missing, use clearly fictional samples marked SAMPLE.

04. Which existing brand assets, design rules or accessibility standards are approved inputs?

> Logo only (high-resolution file to be obtained). No colours, fonts or brand guidelines exist (PVS Q38). Approved standard: WCAG 2.1 AA (SRS N-03). Content principles from PRD Q101: trust first, plain language, no invented statistics, modest imagery.

05. Which design questions are open and require an owner decision before detailed visual work?

Question	Owner
Official name spelling and use of “University” (OD-09)	Chairman
Colour palette from the logo; logo redraw if low quality	Director
Photography: commission or use existing	Director (budget OD-12)
Urdu in release 1 (OD-11)	Director
Admin tool, which sets staff screens (OD-05)	Developer, approved by Director

B. Page goals & hierarchy

06. For each page, what should users understand and do within the first few seconds?

Page	Understand	Do
Home	RIPS offers health-science, computing and business degrees in Sheikhupura; admissions status	Open a program or Enquire
Program	Duration, eligibility, fee, affiliation, intake status	Enquire
Admissions	Steps, deadline, cost	Download prospectus or Enquire
Notices	Newest notice and its date	Open the PDF
Enquire	It is short and someone will call back	Fill and send
Contact	Where and when to reach them	Call, WhatsApp or get directions

07. What is the primary action, and which secondary actions must remain visible without competing with it?

> Primary everywhere: **Enquire** (filled orange-brown button in the wireframes; final colour from the palette). Secondary: WhatsApp (floating green button), Call (header icon), Download prospectus (outline button), program links (text links). Only one filled button per screen area.

08. What content must appear first, and what can be disclosed later or moved to another page?

> First: page title, key facts, status badge, primary action. Later on the same page: full outline, careers, FAQs (expandable), related links. Moved elsewhere: detailed fee breakdown (Fee structure page), leadership biographies (About), affiliation letters (Affiliation page).

09. How will headings, labels, spacing and grouping show the relationship between items?

> One H1 per page; H2 for sections; consistent spacing scale (larger space between sections than within); key facts grouped in a single box with label–value pairs; cards for programs; rows with date and file size for notices; form fields with labels above inputs and hints below.

10. What should the design do when text is long, content is missing or a list has many items?

> - Long program names wrap onto two lines; never truncated in headings; cards allow 3 lines.
> - Missing fee: show "Contact admissions for current fees"; missing photo: neutral placeholder with the program initials.
> - Long lists: 10 per page with pagination; programs grouped by field; Home shows at most 6 programs and 5 notices with "See all".

C. Navigation & interaction

11. How do people enter, move through and leave each page or multi-step flow?

> Entry: menu, search results, shared links, Home. Movement: breadcrumbs, in-page links, related items. Leaving: the form flow ends on the Thank-you page with "Back to programs"; WhatsApp and Maps open outside the site with a label saying so. There are no multi-step visitor flows in release 1.

12. Which controls change page state without leaving it, and how will that change be announced?

> Notices and Programs filters (list updates; a polite live message "12 notices shown"); FAQ expand/collapse (button state expanded/collapsed); mobile menu open/close; inline form errors (announced on submit via an error summary). Staff: status changes show "Saved".

13. Where do users need back, cancel, edit, undo, save or confirm actions?

> Visitors: browser Back everywhere; Clear filters; no cancel needed on the single-step form. Staff: Save draft, Preview, Publish, Cancel (with unsaved-changes warning), Confirm dialogs (SRS L-08), Restore previous version (undo, SRS L-09).

14. What feedback appears after a tap or click, while work is in progress and after completion?

> Pressed state on buttons; "Sending…" with spinner and disabled button during submit; Thank-you page after success; inline "Saved"/"Published" for staff; failure messages per SRS D-07. Filter changes update within 1 s.

15. Which interactions rely on hover, dragging, gestures or animation, and what equivalent is available without them?

> None rely on them. Menus open by tap, click or keyboard; there is no hover-only content, no swiping carousels for essential content (a hero image does not rotate), and no drag-and-drop for visitors. Staff file upload accepts both drag-and-drop and a "Choose file" button.

D. Forms & transaction states

16. Which fields are required, optional or conditional, and how are those rules explained?

> As SRS F-02: required fields marked with "*" and the word "required" for screen readers, with a note "* required" at the top; optional fields say "(optional)". Conditional: City "Other" reveals a text box; Marks appears after choosing a qualification. Each conditional field appears directly below the field that triggers it.

17. What validation appears before and after submission, and how does a user find and fix each error?

> Before: checks on leaving each field, message under the field in red with an icon (not colour alone). After: an error summary at the top ("Please fix 2 fields") with links to each field, focus moved to the summary, and each field message repeated. Messages from SRS F-07.

18. How will forms preserve entered data after an error, timeout or accidental navigation?

> Validation error or failed submission: everything stays filled in. Timeout: same. Accidental navigation away: the browser may restore values on Back; no other saving for visitors (SRS F-08). Staff editors warn before leaving with unsaved changes.

19. What designs are needed for empty, loading, success, partial success, failure and expired states?

State	Design
Empty	Notices, News, staff Enquiries: icon + one line + link
Loading	Button spinner on submit; skeleton rows only in staff lists
Success	Thank-you page; "Published" banner (staff)
Partial success	Enquiry stored but auto-reply not sent: visitor still sees Thank-you (no visible difference); staff list shows a small "email not delivered" mark
Failure	Inline alert with WhatsApp and phone
Expired	Staff session/link expired message with sign-in or new-link button

20. How do uploads, payments or external redirects show progress, cancellation and retry?

> Staff uploads: progress bar, Cancel, then preview or "Upload failed — try again". Payments: **Not Applicable** (none in release 1). External handoffs (WhatsApp, Maps): button text says "Opens WhatsApp" / "Opens Google Maps"; nothing to cancel on the site.

E. Responsive & accessible design

21. What information or action must remain available on narrow screens and at high zoom?

> At 320–360 px and 200% zoom: page title, key facts, Enquire, WhatsApp, phone, menu, breadcrumbs, and the full content without sideways scrolling (except inside wide staff tables).

22. How should columns, tables, navigation and long labels reflow on mobile and tablet sizes?

- Columns stack to one below 600 px; two columns on tablet; up to three cards per row on desktop.
- Fee table: below 600 px each program becomes a stacked card of label–value lines.
- Navigation: full menu at 1024 px+, menu button below that.
- Long labels wrap; buttons grow in height rather than cutting text.

23. What is the intended keyboard order, visible focus behavior and skip-navigation route?

> Order: Skip to content → logo → menu items → Enquire → main content (in reading order) → footer. Visible focus outline at least 2 px with 3:1 contrast on every interactive element. The skip link is the first focusable item and becomes visible on focus (SRS N-04).

24. How will color, contrast, text alternatives, captions and form labels support different users?

> Text contrast 4.5:1 (large text and icons 3:1); status never shown by colour alone (badges have words: Open, Closing soon, Closed); meaningful images have alt text; affiliation letters have a text summary; institute videos captioned; every field has a visible label (SRS N-05, N-06).

25. How will screen-reader users learn about errors, live updates and changes in status?

> Error summary receives focus on submit; field errors linked to fields; filter results count announced through a polite live region; “Sending…” and “Saved” announced; expandable FAQs expose their expanded state; the Thank-you page title announces success.

26. What happens when motion is reduced, images fail to load or the connection is slow?

> Reduced motion: no transitions or scroll effects. Images failing: alt text and a neutral background keep layout intact. Slow connection: text first, images lazy-loaded at fixed sizes so nothing jumps, no autoplay video, page about 1.5 MB or less (SRS P-03, P-11).

F. Visual system & content

27. Which type sizes, colors, spacing units and reusable components need a shared design rule?

Element	Rule (proposed)
Type	One readable sans-serif with an Urdu companion font (e.g. Noto Nastaliq Urdu) for Urdu text; body 16 px, line height 1.5; headings 30 / 24 / 20 / 18 px
Colour	**Not Decided** — derived from the logo (owner: Director): one brand colour, one action colour for Enquire, neutrals, plus success / warning / error; every pair checked for contrast
Spacing	4 px base: 4, 8, 12, 16, 24, 32, 48
Shape	Radius 6 px; touch targets at least 44 × 44 px
Components	Header, menu drawer, breadcrumb, buttons (primary, secondary, text), program card, intake badge, key-facts box, notice row, fee table/card, form field (label, hint, error), error summary, alert, FAQ item, pagination, filters, WhatsApp button, footer, empty state, staff confirmation dialog

28. Which images, icons or illustrations convey essential information, and which are decorative?

> Essential (need alt text): affiliation logos and letters, campus and lab photos that show facilities, leadership photos (name as alt). Decorative (hidden from screen readers): hero background, section dividers, icons that sit next to a text label. Icons used alone (phone, WhatsApp) get text labels.

29. How will real website copy fit the layout, including translations and unusually long names?

> Wireframes use real copy lengths (Q03); layouts tested with the longest program name, a 60-character full name in the form, and Urdu text, which needs about 30% more height. No fixed-height text boxes. Urdu pages mirror the layout right-to-left.

30. What tone should help text, warnings and confirmations use for the intended audience?

> Short, warm and direct, written for a 17-year-old and their parent: “Takes under a minute.” “Please enter a mobile number like 0300 1234567.” No jargon, no blame, no capitals for emphasis. Confirmations say what happens next. Staff warnings name the item and the consequence.

31. Which components or patterns must be consistent across public pages and account areas?

> Buttons, form fields, error messages, alerts, typography and colours are shared between the public site and any custom staff screens. Staff screens provided by a third-party tool keep that tool’s look; only labels and status names are aligned (G-02 status names everywhere). Visitor account areas: **Not Applicable**.

G. Trust, privacy & permissions

32. How does the interface explain why sensitive information is requested and who may see it?

> Under the form title: “We use your details only to answer your enquiry. Only our admissions team sees them.” with a link to the Privacy policy; the consent checkbox wording from SRS O-08. Marks field hint: “Helps us tell you about eligibility.”

33. Which destructive or irreversible actions require a review or confirmation step?

> Staff only: delete content, replace or publish a merit list, change fees or dates, export enquiries, delete personal data, disable a user, change roles — each with a dialog naming the item and consequence (SRS L-08). Visitors have no destructive actions.

34. What should an unauthorized user see without exposing protected content or item existence?

> Visitors opening staff addresses see only the sign-in page — never titles, counts or names. Signed-in staff without the role see “You do not have permission to do this.” without the item’s details.

35. How will users recognize a secure handoff to a payment or other external provider?

> Payments: **Not Applicable** (none in release 1). WhatsApp and Maps buttons say they open the external app. The site always uses HTTPS on rips.edu.pk; the footer states the official domain and that RIPS never asks for fees into personal accounts.

H. Review & acceptance

36. Which user tasks will be tested with wireframes or prototypes, and what would count as a pass?

> Clickable mobile prototype tested with the Doc 05 Q37 tasks plus “send an enquiry with one mistake and fix it”. Pass (proposed): at least 4 of 5 users complete each task unaided; enquiry completed in under 90 seconds; no user misses the Enquire button.

37. What viewport, browser, keyboard and assistive-technology checks are needed before sign-off?

> Viewports 360, 390, 768, 1366, 1920 px and 200% zoom; Chrome on Android, Safari on iPhone, Chrome and Edge on Windows; keyboard-only run of Home → Program → Enquire; TalkBack or VoiceOver spot check; automated contrast check of the palette (SRS T-04).

38. Who records design feedback, resolves conflicting requests and approves each design version?

> Developer records feedback in one list (date, from, page, comment, decision). Conflicts are resolved by the Director against the PVS goals. The approver (OD-01) signs each design version; content accuracy is checked by the Principal and admissions.

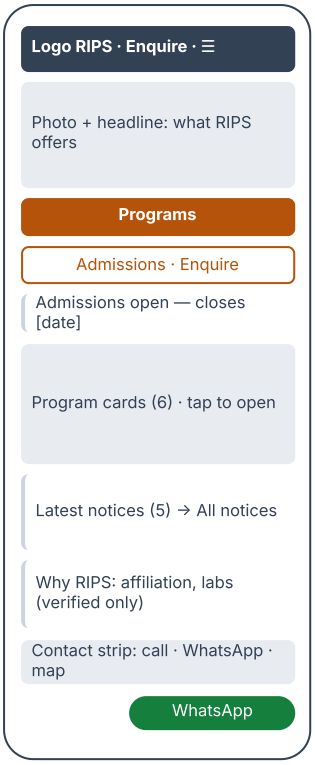

39. What must the final design handoff contain: screen states, copy, assets, behavior and annotations?

> - Mobile and desktop layouts for every template, with all states (Q19).
> - Final copy, including messages from SRS F-07 and help text.
> - Design tokens: colours with contrast results, type scale, spacing.
> - Component list with states (default, focus, hover, disabled, error).
> - Assets: logo files, optimised photos, icons, favicon, sharing image.
> - Annotations: keyboard order, live regions, breakpoints, Urdu notes.

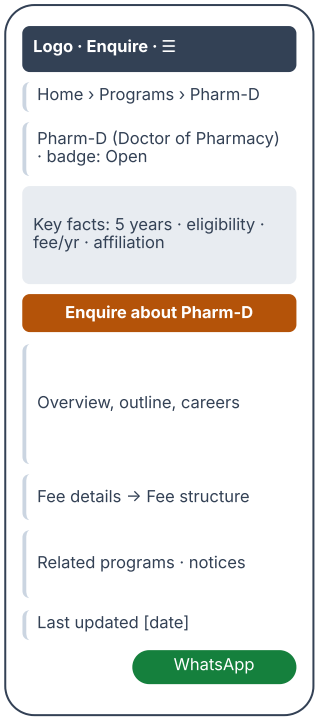

Low-fidelity mobile wireframes

Boxes show content order and priority, not visual style. Orange-brown = primary action (Enquire); green = WhatsApp. Final colours depend on the palette decision.

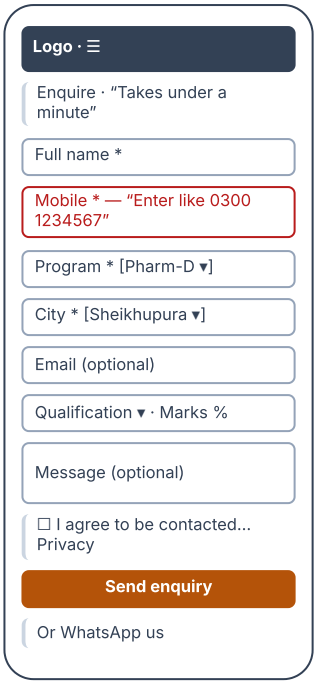

Home (360 px)

Program page

Enquiry form

Notices

Page wireframe checklist — Home

Page / template / version	Home · v0.1
Viewport / prototype link	360 px (above) and 1366 px · prototype link to be added
Audience / access	All visitors · public
Main user task / action	Choose a program or Enquire
Content order	Header → headline and photo → Programs / Admissions / Enquire buttons → admissions status strip → program cards → latest notices → why RIPS (verified facts) → contact strip → footer
Checklist (ticked at review)	☐ Entry and exit routes are clear ☐ Primary action and secondary actions are distinct ☐ Required, optional and conditional content is labeled ☐ Empty, loading, error and success states are shown ☐ Keyboard focus, screen-reader announcements and zoom are considered ☐ Mobile reflow and long text are accounted for ☐ Privacy, permission and destructive-action messages are shown
Annotated decisions and open questions	Hero must not push the buttons below the first screen on a 360 × 640 phone. "Why RIPS" needs approved facts only (no invented statistics).
Review tasks, acceptance and result	Tasks 1, 4, 7 (Doc 05 Q37). Pass: 4 of 5 users start the right path.

Page wireframe checklist — Program page

Page / template / version	Program page template · v0.1
Viewport / prototype link	360 px and 1366 px
Audience / access	Students, parents · public
Main user task / action	Enquire about this program
Content order	Breadcrumb → name and status badge → key facts box → Enquire → overview → outline → careers → fee link → related programs and notices → last updated
Checklist (ticked at review)	☐ Entry and exit routes are clear ☐ Primary action and secondary actions are distinct ☐ Required, optional and conditional content is labeled ☐ Empty, loading, error and success states are shown ☐ Keyboard focus, screen-reader announcements and zoom are considered ☐ Mobile reflow and long text are accounted for ☐ Privacy, permission and destructive-action messages are shown
Annotated decisions and open questions	Fee shown as yearly total with link to breakdown. Withdrawn program state and missing-fee state designed.
Review tasks, acceptance and result	Tasks 1, 2. Pass: fee and eligibility found in under 30 s.

Page wireframe checklist — Enquiry form

Page / template / version	Enquire / Contact form · v0.1
Viewport / prototype link	360 px and 1366 px
Audience / access	Students, parents · public
Main user task / action	Send an enquiry
Content order	Title and reassurance line → required note → fields in SRS F-02 order → consent → Send → WhatsApp alternative → privacy line
Checklist (ticked at review)	☐ Entry and exit routes are clear ☐ Primary action and secondary actions are distinct ☐ Required, optional and conditional content is labeled ☐ Empty, loading, error and success states are shown ☐ Keyboard focus, screen-reader announcements and zoom are considered ☐ Mobile reflow and long text are accounted for ☐ Privacy, permission and destructive-action messages are shown
Annotated decisions and open questions	Error summary at top on submit; inline errors; values kept after failure. Accessible CAPTCHA choice pending (OD-06).
Review tasks, acceptance and result	Task “send with one mistake and fix it”: pass if fixed unaided in under 90 s.

Page wireframe checklist — Notices

Page / template / version	Notices list + notice page · v0.1
Viewport / prototype link	360 px and 1366 px
Audience / access	Current students, applicants · public
Main user task / action	Open the right notice
Content order	Breadcrumb → title → filters → list (title, date, program, file size) → pagination → Archive link
Checklist (ticked at review)	☐ Entry and exit routes are clear ☐ Primary action and secondary actions are distinct ☐ Required, optional and conditional content is labeled ☐ Empty, loading, error and success states are shown ☐ Keyboard focus, screen-reader announcements and zoom are considered ☐ Mobile reflow and long text are accounted for ☐ Privacy, permission and destructive-action messages are shown
Annotated decisions and open questions	Filter results count announced. Merit-list rows show session clearly. Empty state designed.
Review tasks, acceptance and result	Task 3. Pass: correct merit list opened first time by 4 of 5.

Interaction & state record — IS-01 Submit enquiry

Interaction / ID	IS-01 · Submit enquiry
Page / workflow reference	Enquiry form · J1 · UC-01 · FEAT-003
User goal, initial state, input	Visitor wants a call-back; form empty or program pre-selected; enters fields from SRS F-02.

Event / state	Visible response	Data kept or changed	Accessible feedback
Leave invalid field	Message under field	Value kept	Message linked to field
Submit with errors	Error summary at top	Values kept	Focus to summary
Submit valid	Button disabled, “Sending…”	—	“Sending” announced
Success	Thank-you page	Enquiry stored (New)	Page title announces success
Failure / 15 s	Alert with WhatsApp and phone	Values kept	Alert announced

Error recovery, cancellation, confirmation	Retry allowed; double-submit ignored (token). No cancel needed; leaving discards the form.
Acceptance checks and reviewer notes	Tested at 360 px, keyboard only and with TalkBack; matches SRS FEAT-003 tests.

Interaction & state record — IS-02 Filter notices

Interaction / ID	IS-02 · Filter notices
Page / workflow reference	Notices · J3 · FEAT-004
User goal, initial state, input	Student wants their program's merit list; list shows all notices newest first.

Event / state	Visible response	Data kept or changed	Accessible feedback
Choose Program	List updates < 1 s	Filter added to address	"8 notices shown" (live region)
No matches	Empty state + Clear filters	—	Message announced
Clear filters	Full list	Address reset	Count announced

Error recovery, cancellation, confirmation	Back restores the previous filter; shared links keep filters.
Acceptance checks and reviewer notes	Pass: filter usable by keyboard; count announced; works with JavaScript slow or off (falls back to a submit button).

Interaction & state record — IS-03 Publish merit list (staff)

Interaction / ID	IS-03 · Publish merit list
Page / workflow reference	Staff notice form · J5 · UC-02
User goal, initial state, input	Admissions officer has an approved PDF; form filled with type Merit list.

Event / state	Visible response	Data kept or changed	Accessible feedback
Click Publish	Dialog: "Publish Merit List 1 for Pharm-D, 2026–27?" + approver field	—	Dialog focused; Esc cancels
Same list exists	Dialog offers Replace or Cancel	—	Choices read out
Confirm	"Published" banner	Status Published; publisher, approver, time saved	Banner announced
Save fails	"Not saved — try again"	Form kept	Alert announced

Error recovery, cancellation, confirmation	Cancel returns to the form unchanged. Restore earlier version available (SRS L-09).
Acceptance checks and reviewer notes	Pass: content editor cannot reach this dialog; replaced file kept in history.
